

CANCER BURDEN IDAHO 2023

Cancer is a leading cause of death in Idaho.

INCIDENCE 2020 Number of Cases

9,015

Idahoans were diagnosed with a malignant cancer in 2020

MORTALITY 2021 Number of Deaths

3,126

Idahoans died from cancer in 2021

The **Comprehensive Cancer Alliance for Idaho (CCAI)** is comprised of organizations and individuals working to address the continuum of cancer care and to advance priorities within Idaho's Comprehensive Cancer Plan.

Idaho Goals

- Decrease the incidence of preventable cancers
- Decrease preventable cancer deaths
- Improve the quality of life for people in Idaho affected by cancer

Call to Action

- Join CCAI or a local cancer coalition
- Use the Idaho Comprehensive Cancer Strategic Plan to inform your work and align with 2025 goals
- Use evidence-based strategies when working across the cancer continuum
- Know the facts about cancer in Idaho

CCAI 2021-2025 GOALS PROGRESS

CCAI Strategic Plan: <https://ccaidaho.webs.com/idaho-cancer-plan>

MET OR EXCEEDED 2025 GOAL

- Decreased rates of invasive cervical cancer diagnoses*
- Decreased the proportion of Idahoans who could not see a doctor due to cost
- Decreased percent of cancer survivors who are current smoker

ON TRACK TO REACH 2025 GOAL

- Decreased percentage of Idahoans using any tobacco product
- Increased percentage of 9th–12th grade students meeting physical activity goals
- Increased percentage of women aged 50–74 years who had a mammogram within the past two years
- Decreased rates of new breast cancers diagnosed in women at a late stage
- Increased percent women aged 21–65 years receiving guidelines-concordant cervical cancer screening
- Decreased rates of new invasive colorectal cancers*
- Decreased rates of new lung cancers diagnosed at a late stage*
- Decreased rates of colorectal cancer and lung cancer mortality
- Increase percent of Idahoans aged 18–64 years with health care coverage

NO PROGRESS OR LOSING GROUND

- Decreased percentage of Idahoans aged 20+ with a healthy body weight
- No decrease in the percentage of adolescents reporting using artificial UVB methods for tanning
- Increased percentage of cancer survivors reporting poor physical and mental health
- Not on target to achieve treatment-related clinical trials enrollment goals among Idaho cancer patients
- No improvement in 5-year survival among cancer patients
- Increased rates of breast, cervical, prostate and colorectal cancer mortality among Idahoans
- No improvement in the percentage of adults aged 50–75 years reporting guidelines concordant colorectal cancer screening
- Not on target to achieve 80% up-to-date HPV vaccination coverage among adolescents aged 13–17 years

*Statistics for screenable cancers may have been impacted by the COVID-19 pandemic.
